

# “What’s Wrong with my Oak?”

Please join Urban Forest Management on its second webinar on Oak Decline, featuring Jim McGlone, PhD, Urban Forest Conservationist from the Virginia Department of Forestry.

Oaks are long-lived trees but are not immune to stressors, especially in an urban environment. Heat stress, changes in water availability, commercial development, insects and fluctuating winter temperatures all have a negative effect on urban trees. These changes, along with other factors can contribute to a syndrome called oak decline. Learn the symptoms and what you can do about it.

Register for the webinar on Friday, November 20, 2020 at 2:30-3:30 via zoom. ISA (International Society of Arboriculture) CEUs have been approved for this presentation.

We hope to see you there!

When: Nov 20, 2020 02:30 PM Eastern Time (US and Canada)

**Register in advance for this meeting:**
